

Technical Requirements for Indoor performances

Size

When fully constructed, the Globe is 2.3m high and 1.90m wide. It will arrive dismantled to be built inside your venue somewhere out of site of the public. This is not an inflatable Globe. We will provide either screens or a gazebo to create a private backstage space to do this. We need 3m x 3m of space for this as a permanent private space for our exclusive use. You are welcome to provide your own alternative to this but please discuss this with us before the event. It must be for our exclusive use and must prevent the Globe from being in sight.

The performance location inside your venue needs to be able to accommodate the act at its fully built dimensions, plus have adequate space for it to move to and from the performance area and backstage area for each set. *We do not fit through a standard set of double doors at fully build size.*

Team

-It is a 2 person act. One performer and one build technician, who then doubles as a discreet steward during performances to ensure safe movement through the event.

-Where faster build times are required we can bring an extra crew member at extra cost.

Performance Area Requirements

-The Show Globe is usually performed with plenty of space to glide around as a roaming act.

-It can also be used as a static installation if venue space is limited. This still works excellently due to its huge visual impact and interactive nature.

-It must start and finish each set from our backstage area of minimum 3m x 3m.

-For static installation performance, it must still start backstage. It will then glide out into position, then remain static to perform. It will return backstage at the end of each set.

-We cannot negotiate steps during a performance. Single level only.

Performance Durations and Programming

- Performance times are 3 x 30 mins sets or 2 x 45 minute sets or 1 straight hour. Extra performances can be negotiated at extra cost.
- There must be a minimum of 20 minutes between performance sets when arranging programming.
- The act is non-verbal, using music and sound effects to interact.

Power Requirements

- The Show Globe does not require access to power whilst performing.

For bookings over multiple days, we will need access to power to recharge batteries overnight. Batteries are removed from the structure to do this. This requires provision and exclusive use of 2 x normal 240v plugs. Chargers are PAT tested, certificate available. If access to power on site isn't possible, this can be done in our hotel room. We will provide our own plug adaptors for overseas bookings.

Transportation for U.K & E.U Bookings

The Show Globe travels by trailer, this is towed by a van. Parking will be necessary for both, 2 normal spaces side by side is adequate. We need to park directly outside the venue to unload due to the volume and weight of the equipment. This is essential. If the venue cannot accommodate this then we cannot perform. We can move the van and trailer to alternative parking after unloading. Allow 30 minutes to unload.

- The trailer is 4.5m long by 2.4m wide, 2.9m high. -The van is 5.3m long & 2m high.

Arrival, set up and departure times

-We will need access to the building several hours before the first performance time. The exact times will depend on various factors unique to each building but include:

- distance to carry equipment from vehicle unloading area to set up area.
- distance from unloading area to where the vehicles will then be parked if different.
- whether there are any stairs.
- what size the doorways are. With our standard team of 2, with easy access, arrival would be 4 hours before the first show
- it takes approx 2.5 hours after last show to remove.

Where a faster get in and get out is necessary for the event, we can provide a second technician at an extra fee set up can be 2 hours in this case.

Doorway Measurements

The Globe can be dismantled a variety of ways to accommodate different venue doorway and walkway dimensions. We will ask for these before confirming a booking to ensure the most time and cost-efficient version is provided for you.
